**SMART SOLUTIONS
FOR REELS HANDLING
AND PACKAGING**

NON-WOVEN

SMART SOLUTIONS FOR REELS HANDLING & PACKAGING

From palletization to final shipment, Trascar is the **ideal partner for integrated logistics systems**. For over 45 years, Trascar has been supporting its Customers by offering **complete solutions** (palletizing cells, automatic warehouses, picking systems, ...) **for the handling and storage of goods of all product categories**.

All Trascar solutions are developed internally with a dedicated engineering office, as well as all phases of the production process and project management are entrusted to qualified internal staff.

In the solutions developed for the handling and packaging of non-woven reels, Trascar has been developing, since 1996, **taylor made solutions all over the world**.

Regardless of the type of non-woven material (spunbond, spunlace, meltblown, ...), the Trascar solutions can package the rolls coming out of one or more slitters, guaranteeing **quality and repeatability of the packaging** even in presence of high volumes of material, with the following features range:

- Finished rolls width up to 5.600mm
- Capacity up to 700 reels/hour and a minimum width of 60mm
- Reels diameter up to 2.200mm
- Bundle height up to 2.700mm
- Production capacity of 10 doffs/hour and 65 packs/hour

NON-WOVEN

Main features

- Labelling (internal and/or external), stacking, wrapping and protection of the reels
- Manual or fully automatic evacuation of defective reels
- Automatic palletising with finished pallet handling, packaging and labelling
- Complete and automatic warehousing solutions (with AGV if required) in which the finished products can be stored according to a sequence and pre-established geometries following the planned loading and shipping program
- Centralized packaging of reels coming from the slitting department of several production lines

Main benefits of reels handling and packaging

- Zero Contamination policy compliance
- Qualified and certified packaging process (Full control and material traceability in real time) with higher productivity and guaranteed repeatability
- Optimisation of the handling and warehousing activities (Internal logistic optimization)
- Maintaining business operations with reduced personnel (and risks due to human errors) in full safety production environment
- Higher packaging sealing quality and material optimisation (environmentally friendly)
- Real material tracking and data exchange with ERP systems and all machinery in the process. Full PC supervision of the whole logistic
